Revision History

Date	Version	Description
26/03/2024	0.0	Initial draft
31/03/2024	0.1	Drafting template overview
01/04/2024	1.0	Sprint 1 update
<u>22/04/2024</u>	2.0	Sprint 2 update

Overview

The primary focus of the WAPH project revolves around creating an all-encompassing web application named "MiniFacebook." The development process of this web application incorporates comprehensive full-stack web development techniques and cybersecurity principles to ensure its resilience against potential vulnerabilities exploited by hackers. Our team, comprised of four classmates, collaboratively worked on the website's development. We

primarily utilized WhatsApp for communication, supplemented by in-person meetings for discussions. Additionally, we employed collaborative note-taking tools accessible to all team members, facilitating project discussions, idea generation, and progress tracking.

System Analysis

During the initial phase that is for the sprint 0 of the project, we constructed the website utilizing the system configuration file, which was utilized and modified for the WAPH-team project file. The hosts file in the etc folder was updated with the public URL: waph-team01.minifacebook.com alongside the IP address.

Functional Requirements

- **Features for posting like images and texts:** Enabling users to create and share posts with images/texts.
- **Database setup:** Configuring database system for storing application data securely.
- **Notification add on:** Implementing notification system for relevant user alerts.
- **Forms for authentication and user registration:** Implementing secure login and registration forms for user access.
- **Search functionality:** Enabling users to search for specific content within application.
- **Messaging features:** Integrating private messaging functionalities for user communication.

Non - Functional Requirements

- **Error handling:** Managing errors for smoother user experience and application stability.
- **Implementing security features:** Strengthening application security through implementation of various security measures.
- **Cookies:** Utilizing cookies for managing session information and enhancing user experience.
- **Session information:** Handling session data to maintain user context and interactions.

Database

The screenshot shows a terminal window titled "Terminal" running on a "waph-team01.minifaceb" session. The window title bar also includes "Activities" and the connection information "administrator@mwpf-vm: ~/waph-teamproject". The terminal window has a dark background and displays the MySQL monitor. The user has run the command "show tables;" which lists the following tables:

```
mysql> show tables;
+-----+
| Tables_in_waph_team |
+-----+
| comments           |
| messages           |
| posts              |
| superusers         |
| users              |
+-----+
5 rows in set (0.00 sec)
```

Figure 9 tables which stores the data

The screenshot shows a terminal window titled "Terminal" running on a "waph-team01.minifaceb" session. The window title bar also includes "Activities" and the connection information "administrator@mwpf-vm: ~/waph-teamproject". The terminal window has a dark background and displays the MySQL monitor. The user has run the command "select * from users;" which retrieves the following data from the "users" table:

user_id	username	password	fullname	otheremail	phone
1	admin	81dc9bdb52d04dc20036dbd8313ed055	Sai Sandeep Pasham	sandeep@yahoo.com	5133016222

Figure 10 user tables

User Interface

Front-End:

Edit Profile Feature: Users can modify their full name, email, and phone number.

Change Password Option: Users can change their password if facing any issues.

Posts Visibility Setting: Upon logging in, users can view site's posted content.

Back-End:

Database Creation: Established a database with essential tables for the application.

Users Table: Stores user information including full name, username, password, email, and phone number.

Posts Table: Records posts from various users, containing fields like Post ID, Title, Content, Post Date, and Owner.

Database Integration: Connected the database with the front end to save user inputs.

Implementation

Security Analysis

Scrum Process

Sprint 0

Duration: 03/22/2024-03/31/2024

Completed Tasks:

1. Our team has successfully established both public and private repositories named “waph-teamproject” and “waph-team01.github.io” correspondingly.
2. SSL certificates and keys for the team project have been generated.
3. HTTPS has been configured within the local domain name to ensure secure communication.
4. A database has been set up for the system.
5. Individual home pages have been developed for all team members, and their respective lab files have been transferred to the team directory.
6. Testing of the index.html page has been carried out, yielding the anticipated performance and functionality as observed during the tests.

Contributions:

1. Tulasiram Nakkanaboina, 11 commits, 7 hours, contributed in generating

the SSL keys and certificates.

2. Vihasith Rasala, 8 commits, 6 hours, contributed in documentation of README file and organizing the data.
3. Grahika Rampudi, 8 commits, 7 hours, contributed in creating the personal page of our team which includes details of our team members.
4. Sai Sandeep Pasham, 7 commits, 6 hours, contributed in creating the database-data.sql, index.html page which includes the details of admin login.

Sprint 1

Duration: 03/28/2024-04/01/2024

Completed Tasks:

1. Established the database according to the outlined criteria.
2. Developed both login and registration forms.
3. Executed fundamental features for authenticated users, such as password modification.

Contributions:

1. Tulasiram Nakkanaboina, 11 commits, 7 hours, contributed in creating user registration and profile edit php files and further developed index.php file
2. Vihasith Rasala, 15 commits, 6 hours, contributed in documentation of README file and organizing the data. Created and developed logout php file.
3. Grahika Rampudi, 8 commits, 7 hours, contributed in creating and organizing the database and its implementation in back end of web application.
4. Sai Sandeep Pasham, 7 commits, 6 hours, contributed in creating the change password and login php files.

Sprint 2

Duration : 04/15/2024-04/22/2024

Completed Tasks:

1. Updated the database design and implementation to incorporate new posts, edits, deletion and user management access.
2. Logged-in users can add a new post, and add a comment on any post
3. Logged in users can edit their own post and the user cannot edit post of other users.

Contributions:

1. Tulasiram Nakkanaboina, 22commits, 14 hours, contributed in creating usermanagement.php and updated index.php, viewprofile, edituser php files ,modified style.css to give new appearance to the application.
2. Vihasith Rasala, 18 commits, 10hours, contributed in updating the Edituser.php, viewpost.php, addpost.php, and insertpost.php.
3. Grahika Rampudi, 19commits, 11 hours, contributed in updating the index.php, deletepost.php, edituser.php, database.php.
4. Sai Sandeep Pasham, 17 commits, 9 hours, contributed in updating addcomment.php , Insertpost.php, edituser.php, Index.php and documentation of README file and organizing the data.

Sprint Retrospection

- The main problem we faced for a team call is unmatched schedule of team members. We are usually doing our team meetings in late nights.
- Online calls didn't meet the expected progress of the project, so we are making ourselves available for physical sessions which is difficult.
- Proper collaborative dashboards require premium subscriptions for third party applications.
- Sandbox doesn't work properly which is a dot in a white page.
- Team members use different OS like MacOS or windows where it's difficult to work in virtual machine setup if it's a Macbook.

Figure 11 login page
